

Planned Parenthood Arizona, Inc.

Visit Instructions: **STI Testing (Full Screen)**

A full screening includes tests for the most common Sexually Transmitted Infections (STIs), including: **Chlamydia, Gonorrhea, Syphilis and HIV**. Urine and blood samples are collected and sent to a lab for testing.

We offer confidential HIV antibody testing with pre- and post-test consultation. You can choose between a rapid test (results available that day) and blood test (sent to the lab, and the results come back within a few weeks). All HIV results must be given in person, so if you opt for the blood test we send the test to the lab and another appointment will be scheduled to get the results.

Important Considerations Before Your Appointment:

- Testing should be done two weeks after possible exposure for Gonorrhea and Chlamydia for the urine based test and 90 days for possible exposure for blood testing.
- If you are having your menstrual cycle or vaginal bleeding, Gonorrhea and Chlamydia testing cannot be performed.
- For the urine test, please do not urinate for an hour before your visit.

For Your Visit:

- Payment is expected at the time of service (cash, credit card or money order; no personal checks, please). If you are using a credit card you will need to provide photo ID. If someone will be making a payment on your behalf they should be there with you and also prepared to present photo ID.
- Please bring **valid photo identification** and, if you have insurance, **a hard copy of your insurance card**, to present when you check in for your appointment.
- We ask that you **do not bring children with you to your appointment** – for their safety, children cannot go into the back office.
- If you are running late, call us, so that we can provide you with your options for the day. If you are late, we do reserve the right to reschedule.
- Please let us know 24 hours in advance if you need to cancel or reschedule your appointment.
