

Annual Report
Fiscal Year 2018-2019

Anne Schowe
Board Chair

Dear Friends,

Over the last three years, we have been focused on implementing a four-year strategic plan. Due to the ongoing attacks on reproductive health care, our number one strategic priority is simple – Our Doors Stay Open! We are pleased to report that this year, just like the past two years, our doors stayed open for everyone who needed us.

We have continued to not only survive – but to thrive – as an essential resource for communities throughout the Central Coast. In fiscal year 2018/2019, we provided care to 31,057 patients through 58,870 visits. We are proud to be the primary provider for abortion throughout our region.

In June, PPCCC began providing gender affirming care. This new service fills a critical need for transgender patients who face numerous barriers to accessing the care they need.

We continued to work tirelessly to address the rise in STIs (sexually transmitted infections), both locally and throughout the state of California. This year, we diagnosed 2,387 cases of STI's, a staggering 18% increase from just two years ago. We also launched a marketing campaign – The Only Way to Know, Is to Know – to highlight the importance of getting tested.

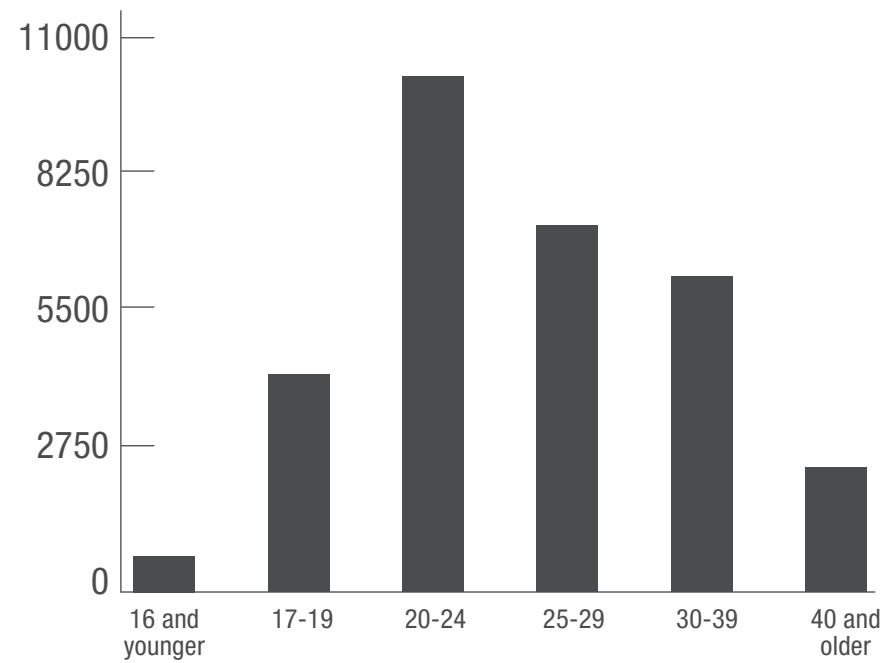

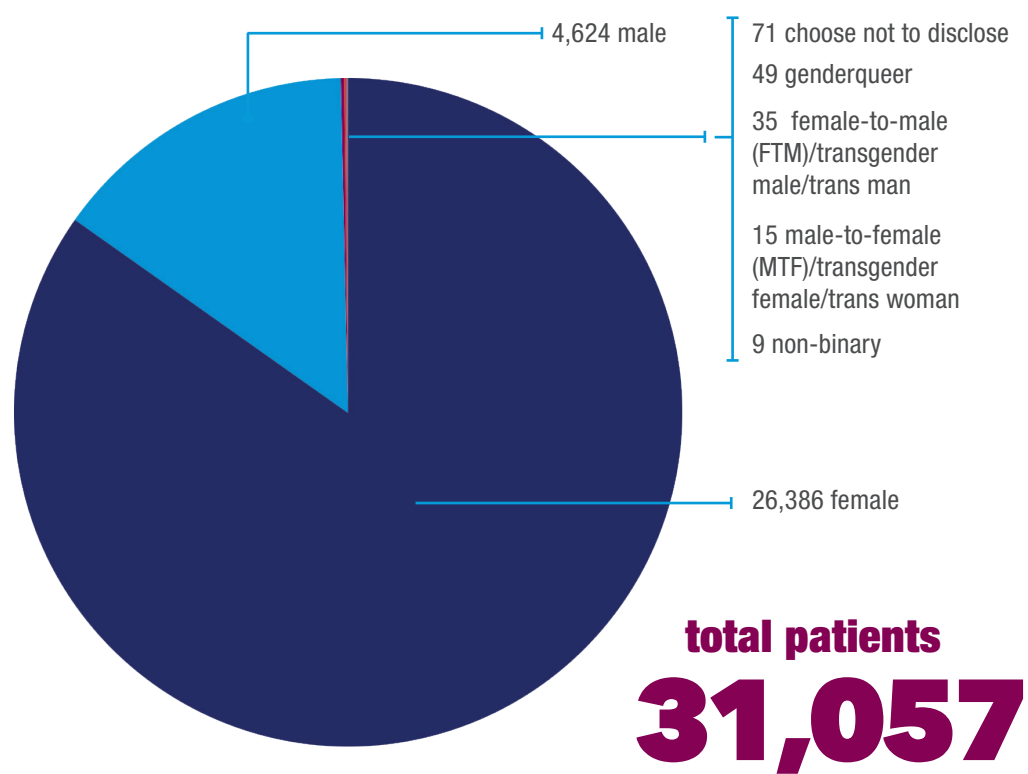

We are honored to be the most trusted provider of reproductive health care – we couldn't do it without you!

Jenna Tosh, PhD
President & CEO

who we serve

PPCCC is proud to serve patients of all genders.

patients by age

by the numbers

58,870 health center visits

29,744 visits when the patient received an STI test

22,634 visits when the patient left with birth control

8,115 units emergency contraception dispensed

6,079 cancer screenings

3,284 abortions

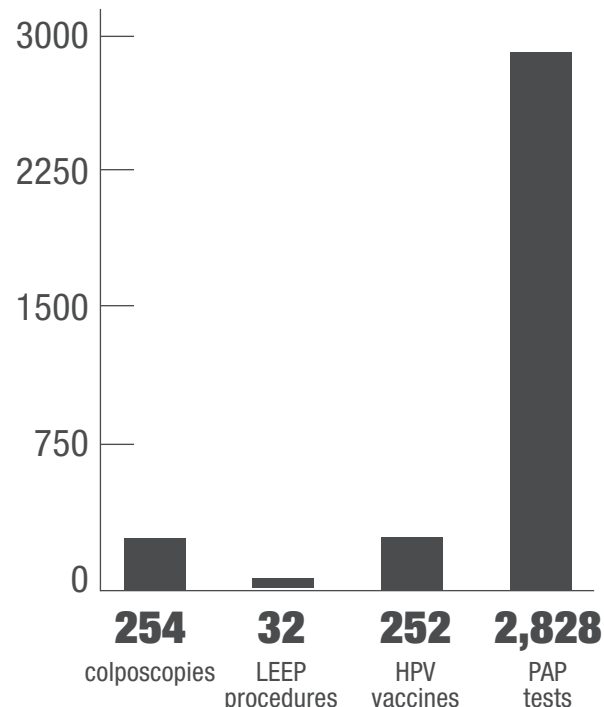

98 vasectomies

cancer prevention & detection

cervical

Gardasil vaccine helps prevent human papillomavirus (HPV), a cause of an estimated 75% of cervical cancers and 90% of genital warts.

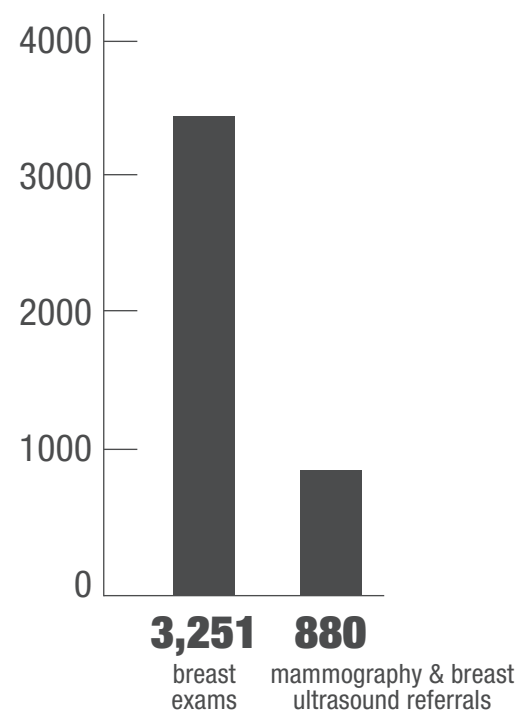

PAP tests, colposcopies, and LEEP procedures represent a progression of cancer detection tests. PAP tests are used for routine screenings. Abnormal findings are evaluated by colposcopies and treated by LEEP procedures.

breast

Regular clinic breast exams by a health care provider are important for finding breast cancer early.

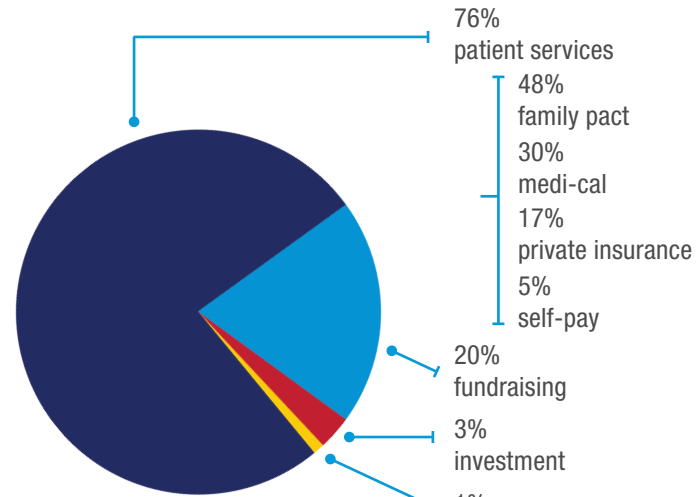

Planned Parenthood continues to recommend that women over 40 get mammograms.

we ❤️ our **327** volunteers who generously gave their time to advance our mission!

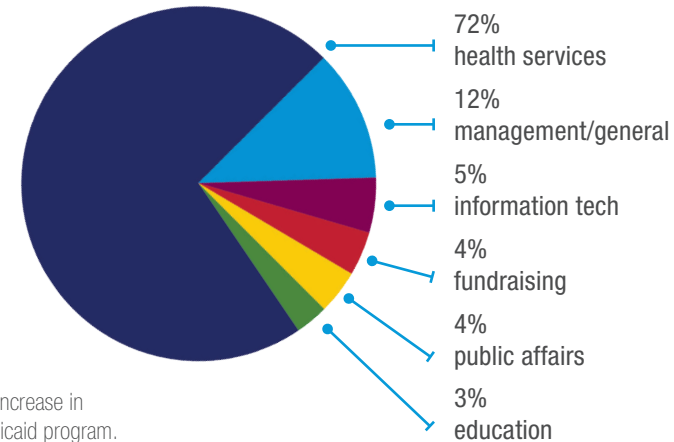

source of funds

Total Revenue:
\$19,130,683

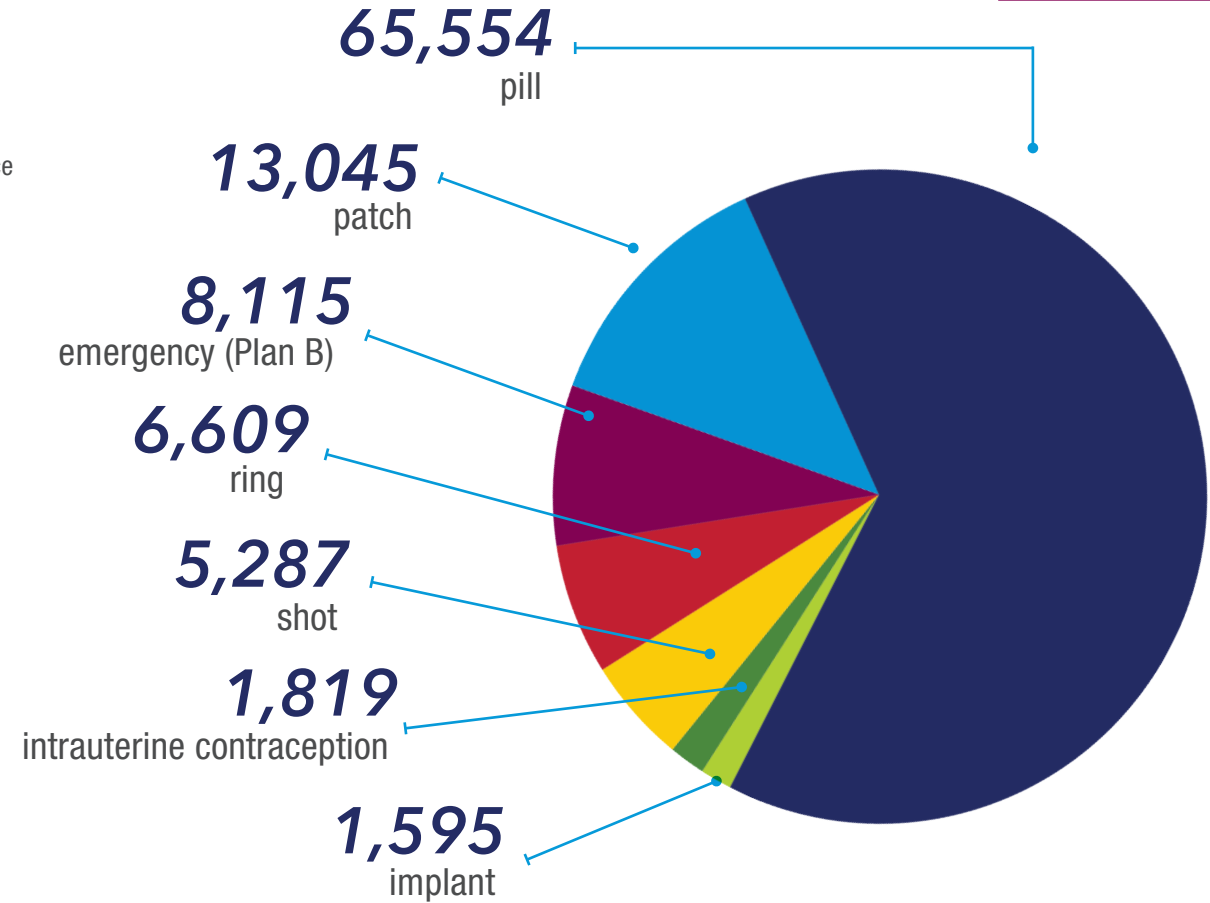

use of funds

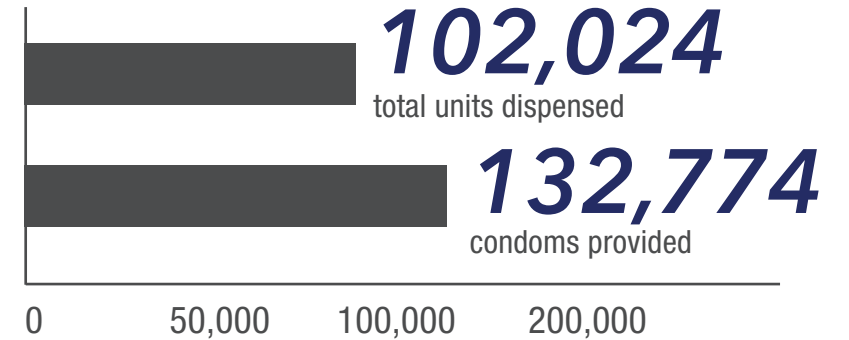

Total Expenses:
\$17,165,351

Net Income/Loss \$1,965,332
Net income is the result of a temporary increase in payment rates from California State Medicaid program.

birth control

sti prevention

Sexually transmitted infections (STIs) are on the rise in California, including on the Central Coast. We provided 88,886 STI tests this year.
