

Did you know that Chlamydia and Gonorrhea are the two most common sexually transmitted infections and can happen to anyone?

If you've recently tested positive for Chlamydia or Gonorrhea you may be eligible for this research study.

Announcing a research study evaluating an investigational drug, EVO100 vaginal gel, for the prevention of chlamydia and/or gonorrhea infection in people who have a vagina and cervix and who have been recently diagnosed with and treated for these sexually transmitted infections. There is no charge for the investigational study drug or study procedures. Participants' health will be monitored closely.

**You may be eligible to participate if you meet all of the following criteria:**

- Are a healthy, sexually active person who has a vagina and cervix 18 years and older
- Have received a diagnosis of and may have received treatment for chlamydia and/or gonorrhea in the last 16 weeks
- Are not currently pregnant
- Are willing to use a self-controlled method of birth control
- Are willing to use the vaginally inserted gel (investigational product)
