

# Parent-Child Communication

### **Welcome and Introductions**

Overall education is important and that includes sexual health. One in four youth is confused about sexual health information. They go to their peers, TV, and the internet to get answers. Parents can serve as the youth's point of contact by learning and providing honest information. Parents are influential in the decisions their children make about sex. This material is geared to highlight opportunities for parents to improve their communication with their children (especially youth).

Parental involvement and communication about sexual health are known to have a positive result. This includes delaying sexual debut among youth and lowering substance use.

Mom, thanks for all your support and advice. I want to take care of myself.

Sweetie, time is important. Take advantage, educate yourself, and take care of your health.

I have talked to my son about sexual health more than once.
